

Partnership Concept Note

Business Development · a shared opportunity translated into a practical LEA Labs collaboration

Drafting note. This concept note is an early-stage document for discussion. It does not create a commitment or agreement until the Parties approve and sign the appropriate contracting documents.

1 · Concept details

Proposed period	
Decision required	

2 · LEA Labs context

LEA Labs closes the distance between learning and doing. It creates room for people to practise, make mistakes, receive guidance, and leave with work they can show. This work can become the beginning of a wider journey: learning can fuel innovation, innovation can create solutions, and enterprise can turn those solutions into lasting impact.

The proposed partnership should therefore connect a real need to a practical pathway. It should clarify who will learn or benefit, what they will practise, what evidence they will produce, how feedback will be used, and what opportunity will follow.

3 · Executive summary

The opportunity:

The proposed LEA Labs response:

The value of working together:

4 · Context and need

Describe the problem, opportunity, audience, or system gap that the partnership will address. Explain why it matters now, what is currently missing, and what would improve if the collaboration succeeds.

5 · Objectives and intended outcomes

Objective 1:

Objective 2:

Objective 3:

Intended learner, community, organisational, or commercial outcome:

6 · Proposed workstreams

No.	Workstream	Main activities / output	Lead / support

2			
3			

7 · Delivery approach

LEA Labs can contribute through four connected offers. The Learning Platform provides project-based curriculum, course building, content, assessment, coding practice, certificates, portfolios, and learner support. Corporate Training provides flexible pathways for digital fluency, applied AI, leadership, innovation, and early-career development. Technology Services supports architecture, integration, deployment, custom development, and digital products. Operations supports the connected workflows needed for schools, partners, finance, reporting, CRM, events, and learners.

The LEA progress model is **start** → **practise** → **share** → **advance**. The proposed delivery should help participants find a starting point, build working habits through practice, receive feedback, create evidence, and move toward a next opportunity. The broader LEA rhythm is **learn** → **evolve** → **advance** → **impact**.

Delivery format, location, and participant experience:

Participants, reach, and inclusion approach:

Duration, milestones, and evidence:

8 · Resourcing and partnership ask

LEA Labs contribution:

Partner contribution:

Funding, sponsorship, or in-kind support requested:

Key dependency, risk, or safeguarding consideration:

9 · Expected impact and measurement

Describe how the partnership will show progress. Evidence may include participation, attendance, completed projects, improved confidence, assessment results, certificates, portfolio work, organisational adoption, revenue, cost savings, or community reach.

10 · Next steps

Decision or approval needed:

Next meeting / action and owner:

Target date:

Contracting route. If the concept is approved, record detailed scope in a Statement of Work and confirm confidentiality, data protection, safeguarding, funding, and partnership terms in the appropriate agreement.
