2 · What LEA Labs provides

LEA Labs prices work from the outcome the client or partner wants to create. LEA is not only a training provider: it connects practical learning, human guidance, technology, and operational support so people and organisations can move from intention to useful evidence.

The **Learning Platform** supports project-based learning, curriculum and course building, content, assessment, coding practice, certificates, portfolios, and learner support. **Corporate Training** supports digital fluency, applied AI, leadership, innovation, and early-career development.

Technology Services supports architecture, integration, deployment, custom development, and practical digital products. **Operations** supports school, partnership, finance, reporting, CRM, event, and learner workflows.

Pricing should therefore make clear whether the client is purchasing learning access, facilitated delivery, a tailored programme, a technology product, an operational service, or a combination.

3 · Service options

No.	Service / package	Includes	Fee	Basis
1				Per learner / session / fixed
2				Per learner / session / fixed
3				Per learner / session / fixed
4				Per learner / session / fixed
